

Strategy Bridge International Delivers New "Fundamentals of Systems Engineering" Course

Three Day Version of Course Focuses on Complex Project Interfaces

Winchester, VA ([PRWEB](#)) August 31, 2011 -- Strategy Bridge International, the leader in Systems Engineering based strategy development, has successfully completed changes to its core five day Fundamentals of Systems Engineering course, resulting in both three- and five-day delivery options. The five-day class was specifically designed to meet the complex needs of NASA's Systems Engineering division. The new three-day course focuses on the interface between people, processes and systems that supersede all engineering disciplines. Both classes provide the knowledge base and hands on "how-to" experience that encourages project success.

"The five-day course has been well received by hundreds of students, but we felt that we could enhance the overall learning experience." says Mark Wilson, CEO of Strategy Bridge. "The course leverages our library of systems engineering materials and incorporates the latest in research from the [International Council of Systems Engineering's \(INCOSE\) 2011 Symposium](#). The new course provides the tools for developing systems engineers to have an immediate impact when they return to their offices." The inaugural three-day course delivery was video taped for re-use as a reference by students.

"We believe that working professionals learn best when concepts and methods are presented in the context of their own environment. From this new course baseline, we can customize courses for any of our customers." commented Paul AmRhein, Vice President for Business Development.

Both courses are based on the INCOSE Systems Engineering Handbook and teach new Systems Engineers the basics and offer experienced project managers an enhanced refresher course to hone their skills.

ABOUT STRATEGY BRIDGE –

Strategy Bridge International (www.strategybridge.com) enables clients to bridge the gap between strategy development and desired results through systems thinking, systems engineering, decision analysis, and project management. Strategy Bridge offers facilitated planning workshops and focused consulting to guide strategy and systems development, project planning, and decision-making. Strategy Bridge master instructors average over 25 years of practical on-the-job experience running complex projects and teach a full portfolio of tailored courses designed to improve organizational performance in systems engineering, project management, and leadership.
